ALOR SETAR INSTRUCTIONAL COURSE ON SHOULDER SURGERY 2016

07th & 08th November 2016
Auditorium & Seminar Rooms
Hospital Sultanah Bahiyah
Alor Setar, Kedah

Organized By

OBJECTIVE & TARGET

Shoulder arthroscopic surgery has advanced greatly in Orthopaedics in our country. Conservative management had been the mainstay of treatment for this kind of injury before. With the emergence of better knowledge of the anatomy of the shoulder, nowadays, most shoulder injury can be managed surgically with improved results.

However the learning curve is long and difficult. The intra-operative technique differ according to the type of the injury.

We hope that this kind of simple workshop will give surgeons sufficient amount of exposure especially with regard to the surgical technique and fundamental approach to shoulder injury.

We hope that the practical session & live surgery during the programme can be utilized fully to improve our knowledge and to brush up our surgical skill besides sharing opinions with others regarding shoulder surgery.

Thank you

Yours truly,

Dato' Dr. Suresh Chopra
Course Advisor

Senior Consultant In Orthopaedic And Head
Department Orthopaedic & Traumatology
Hospital Sultanah Bahiyah, Alor Setar, Kedah
