INTRODUCTION

The modern era of total joint replacement began in 1960's. Since then, arthroplasty became the most successful innovation in orthopaedics and represent a major advance in the treatment of degenerative joint disease, providing excelent pain relief, restoration of joint motion and stability, and correction of deformity.

The increasing aging population will also increase the number of joint replacement cases in this country. Now, joint replacement has gained popularity and many hospitals in Malaysia are planned to have their own arthroplasty services.

Exposure from this workshop will help the doctors and paramedics to acquire basic and knowledge in arthroplasty. Training and continuous education is very important to equip the surgeon and their supporting staff with the basic principles and recent update in this field.

OBJECTIVES

1. To understand the principles and practices of primary arthroplasty
2. To familiarize the paramedics and operating room personnels with common problems and instrumentation in the field of arthroplasty
3. To expose participants on the updates of Arthroplasty Management

PARTICIPANTS:

- Orthopaedics Surgeons
- Orthopaedics Trainees/ Medical Officers
- Operating Room Personnel (ORP)
- Nurses
- Paramedics
